## 4 RCR123A LI-ION BATTERIES + RCR123A CHARGER

### CHARGE TIME:

Battery	Approximate Charge Time (hour)	
Model	1 cell	2 cells
RCR123A	2.7	5.4

### IMPORTANT NOTES:

1. It is normal that new battery can not be charged to its rated capacity when it is being used for the first time. To reach full capacity, new batteries have to be charged and discharged 3 to 5 cycles.
2. Batteries will self-discharge when not in use. It is recommended that you do not let battery sit idle for a long time before use.

### FEATURES:

1. Charges 1 or 2 pieces RCR123A Lithium-ion batteries.
2. Smart charger, build-in microprocessor automatically switch off when batteries are fully charged.
3. 100V-240V input.
4. With car charger.

### OPERATING INSTRUCTIONS:

1. Insert the battery(s) into the battery compartment(s) with correct direction of polarity.
2. Connect the adapter to the charger and switch on the power.
3. Green LED indicates the power is on if there is no battery in the battery compartment.
4. Red LED indicates the batteries are charging properly.
5. When Red LED turns to Green, the batteries are fully charged.

### CAUTION:

1. This charger is intended for use with 3V RCR123A Li-Ion batteries only. Attempt to charge other types of batteries might cause personal injury and product damage.
2. Indoor use only. Do not expose the charger to rain or moisture.
3. Operating temperature: 0°C ~35°C
4. Before use, read instruction.
5. NOT responsible for any damage or injury caused by misuse or not following the instruction or not paying attention to the warning or caution listed here.
